Universe FX Robot

User's Guide

Dear Trader!

Thank you for purchasing Universe FX Robot!

After you have purchased the EA on our website, you will get an email containing all the necessary informations and the EA itself. After that, just follow the instructions of this User's Guide and you can start earning a LOT OF MONEY with Universe FX Robot!

Strategy description

Universe FX robot contains a lot of new innovative features. This Expert Advisor is the result of our 2-years of development. Our team mainly consists of programmers and engineers, however, even university professors helped us to discover connections in the forex market and build different mathematical models.

Universe FX Expert Advisor makes profit on breakouts in the forex market. It evaluates the entry points by different methods and decides if it's worth trading on that point.

If the EA decided to trade, then it automatically sets the best risk and lot size parameters in order to get the best performance. Furthermore, it also decides to open one or more orders. On the management of the orders, it analyzes the movements of forex and it trailes the Stop Loss according to them. If the breakout happens, then the EA is able to earn a lot of pips in a short amount of time. If the breakout does not happen, the EA closes the order immediately.

This way the EA will have a unique Risk Reward ratio, because it can make huge profit while it keeps the risk constantly low.

Thanks to these features Universe FX Robot can be really beneficial!
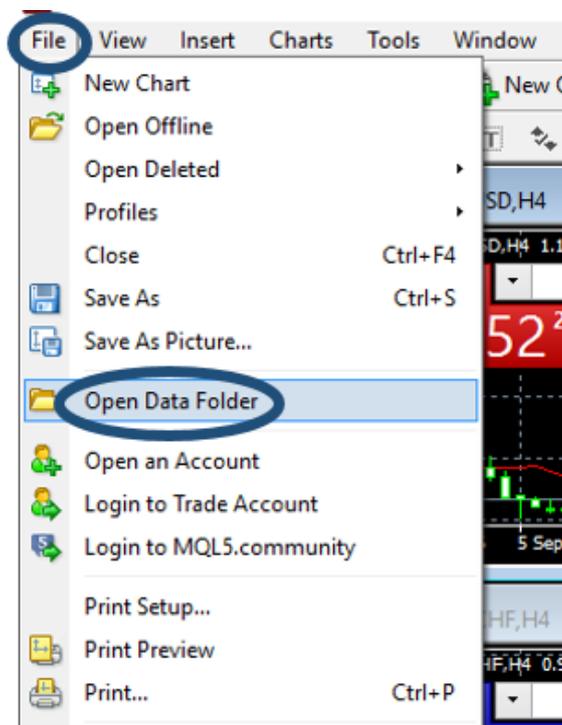

First step: Getting the activation code

1, Go to our website: https://www.universefx.com

2, Login with your credentials which you can find in the email.

3, Copy your MT4 account number you use to the text field and click to „Save Changes".

You will automatically get an activation code which will appear next to your account number.

Second step: Setting up Universe FX Robot

1, Extract the ZIP file which you can find in the email.

2, Open Metatrader 4 trading platform and click on „File" -> „Open Data Folder"

3, Open „MQL4" folder.

4, Open „Libraries" and copy the .dll files here.
